

Success Story

Before Cami started Vision Therapy, we had searched for over 5 years for someone who could help Cami with her developmental / learning delays. She had been tested by lots of specialists from Huntsville and Birmingham and the only diagnoses we were ever given was "Learning Disorder - Not Otherwise Specified". I actually cried when Dr. Phil told me that Cami had neuro visual issues and that vision therapy could help her.

Vision Therapy has been life changing for Cami. She was repeating kindergarten after waiting a year to even start school. When she started therapy, she could not even recognize her letters and she is now reading beginner readers. She converses with people, whereas before therapy, she would answer direct questions, but expressed herself with great difficulty and made very little eye contact. I now have people from both church and school tell me how Cami initiates contact with them, as well as looks them in the eye when she speaks. The assistant principal at her school has noticed and commented on the difference and improvement in her social interactions.

I am so very thankful to Dr. Phil, Dr. Shannon, and Mrs. Rita for the work they have done with Cami as well as for the care they have shown her. She loved coming to therapy. Cami's life has truly been changed through therapy, and we will forever be grateful.

Linda
